Sachbuch Biografie, englisch

The invention of timepieces was more significant for human culture than the printing press, or even the wheel. They have travelled the world with us, from the depths of the oceans to the summit of Everest, and even to the Moon. They regulate our daily lives and have sculpted the social and economic development of society in surprising and dramatic ways.

Welcomes us into the hidden world of watchmaking, and to a history of time that spans centuries and continents.
